

# How to Install ICE for OSX

## Download ICE and OpenOffice.org

1. Download the [ICE disk image](#)<sup>1</sup>
2. Open ice\_#\_x.dmg (x – i386 is for Intel, ppc is for PowerPC)
3. Drag Ice folder into your applications folder
4. [Download](#)<sup>2</sup> OpenOffice.org 2.0 for Mac OS X – 127Mb
 

**NB:** There is no need to run OpenOffice.org 2.0 it is only used to automate either the latest OpenOffice.org or NeoOffice

Open the OpenOffice.org dmg file

Drag the OpenOffice.org app file into your application directory
5. Either download and install [OpenOffice.org](#)<sup>3</sup> or [Neo Office](#)<sup>4</sup> (this is what's used to write with)

## Configure software

### Configure OpenOffice.org/Neo Office

1. Using Finder go to Applications... Ice... Setup... and open “Configure OpenOffice.org.odt”
2. When the document loads select enable macros.
3. From the menubar select ICE...Change port
4. Enter 2002
5. Close the document and restart the application

### Add a SVN repository

1. To configure ICE: Go to Applications... Ice... Ice.app:
2. Go to <http://localhost:8000>, a ‘Config editor’ page will load
3. Enter a SVN URL in the ‘New repository URL:’ field or fill in the information required under ‘Advanced repository settings’
4. Click ‘Save’ and then click ‘Close editor’.
5. Enter your username and password for the SVN URL provided.  
ICE will then checkout the content from the given SVN URL.

## Add document templates

Before you can create documents using ICE you will need to add some ICE templates. In order to use the ICE templates affectively also install the word processor toolbars.

1. Create a folder called 'templates' in the root of your repository. For example if your content was located in `~\ICE\MyFiles` make the directory `~\ICE\MyFiles\templates`
2. Download either an OpenOffice.org template ([Default.odt<sup>5</sup>](#)) and/or Word template ([Default.doc<sup>6</sup>](#)) into the templates directory you just added. Change these files or add others into the template directory as required.

You should now be able to create new files using the "Add" tab in ICE.
