

OSX Installation Guide

Download and install software

ICE

1. Download the [ICE disk image](#)¹
2. Open ice_#_x.dmg (currently only intel is supported for Leopard 10.5)
3. Drag the **Ice2** folder into your applications

OpenOffice

1. [Download OpenOffice](#)² 3.1 for Mac OS X
2. Open the OpenOffice.org dmg file
3. Drag the OpenOffice.org app file into your application directory

Configure software

Install Toolbar

1. Download and install [ICE Toolbar](#)³
2. Ensure install **for all users** is selected during the installation process.

Configure OpenOffice.org

1. Open a Text Document in OpenOffice.org
2. From the **ICE Toolbar**, select **Help**
3. Click **Change Port**
4. Type **2002** in the text box
5. Click **OK**
6. Close the document and restart OpenOffice.

Configure ICE

1. Run Ice2.app
2. Go to **http://localhost:8000**

3. Add subversion repository

Add document templates

1. Create a folder called **templates** in the root of your repository. If your content is located in `~\ICE\MyFiles`, create `~\ICE\MyFiles\templates`
2. Download either an OpenOffice.org template ([Default.odt⁴](#)) and/or Word template ([Default.doc⁵](#)) into `~\ICE\MyFiles\templates`.
3. These template files form the basis of ICE documents, they can be changed or others added, as required.
