

## ICE in Moodle

This demonstration show how an ICE service can be used by Moodle so that authors can upload their ICE styled documents into Moodle, the documents are then rendered into HTML and PDF. This feature is only currently available for USQ staff as the code is not part of the ICE open source project however, we hope to make it available in the no so distant future.

Click the play icon to display inline or view the video directly.

View the demo on the ICE website.
